

# JAMES MURPHY

Manager, Data Reporting  
Dallas County Promise

James has worked in education technology for over 20 years for both public and private organizations in Texas. His experience includes client support and training for a regional education service center, applications development for an educational software company, and programming & database management for two Dallas area public school districts. James has worked with a variety of stakeholders such as directors, end-users, superintendents, outside vendors, government agencies, and community members, and his ultimate goal is always to deliver clean, accurate, and useful data in a timely manner. James understands that access to clear and relevant information helps empower decision makers to provide the most desirable options for student success.

Prior to working with Dallas County Promise, James served at Duncanville I.S.D. in a dual role as Programmer/Database Administrator. James designed various web applications, data exchange scripts, and interactive reports to automate the dissemination of information throughout the district. Data accuracy and distribution were substantially improved during his tenure, and James created detailed documentation which he offered along with one-on-one support to help others involved with data management and delivery.

James attended Austin Community College and DeVry University in Irving, TX where he graduated summa cum laude with a Bachelor of Science degree in Computer Information Systems.
